Drilling Progress Report

Pryme Oil and Gas Limited (ASX: PYM / OTC: POGLY), an oil and natural gas producer and explorer operating on shore in the U.S. with interests and focus in the Gulf States and Texas, is pleased to announce that its first Raven Project well the Spinks-Middlebrooks #11-1 has reached the target depth of 10,900 feet. The driller is currently coming out of the hole in order to condition the well bore for logging.

"We have had good gas readings during the drilling. The well will be logged and evaluated overnight and we anticipate announcing the logging results tomorrow," Pryme's Managing Director Justin Pettett said.

Project Description

The Raven project covers mineral leases in the prolific Cotton Valley and Hosston natural gas trends in Lincoln Parish, Louisiana. Raven exists along a natural gas fairway of Cotton Valley marine bars which are the target of the Raven project. The project has been classed as an "engineering play" to the extent that more emphasis is given to the drilling and completion techniques and production of the well, as generally most wells in the area will produce natural gas and condensate. Approximately ten drilling locations have been identified in the project with the leasing of acreage continuing. Prospective gas reserves to the 100% working interest within the Raven Prospect could be on the order of 50Bcf (20Bcf net to Pryme) according to Wave, based on 5Bcf per well. Pryme has a 40% working interest (30% Net Revenue Interest) ownership in the project.
